UTKARSH AGARWAL

Software Engineer

+91-7680901396 utkarshagarwal585@gmail.com https://linkedin.com/in/utkarshagarwal585

SUMMARY

Experienced backend developer skilled in JavaScript, TypeScript and Python. Proficient in building scalable applications, developing RESTful APIs, and optimizing system performance. Strong focus on clean, maintainable code and delivering efficient solutions.

EXPERIENCE

FullStack Developer

LunaJoy (Y - Combinator Company)

09/2024 - Present Remote, United States

https://hellolunajoy.com

LunaJoy, a rapidly growing startup in US backed by Y Combinator is a precision mental health care platform that is specialized in women's mental health through all phases of life.

- Reduced appointment scheduling time by **60%** through integration of Sohar health RESTful stateless API for insurance eligibility checks.
- Integrated the RudderStack Events with Advanced MD to GHL Sync automation service to store the metrics in the data warehouse to get analytics and tracking activity.
- Managed **7** subdomains in GoDaddy and URL mappings for streamlined website navigation in Squarespace.
- Implemented the workflow for retrieval of stored secrets from Secret manager through Lamda@Edge to CloudFront on AWS Infrastructure.
- Boosted revenue by **30%** through clinical tags for patient assessment drop-off, improving tracking by leveraging GHL.
- Amplified application speed by **20%** by refactoring core algorithms.

Software Developer

Rhizicube Technologies

06/2022 - 09/2024 Noida, India

https://www.rhizicube.ai

Rhizicube stands as an advanced technology enterprise, dedicated to delivering holistic solutions for both startups and enterprises.

- Collaborated with a cross-functional team to gather requirements, design the high level clean architecture, deliver a scalable, extensible & robust solution.
- Worked closely with stakeholders to gather requirements, analyze business needs, provide technical expertise to deliver high-quality software solutions.
- Conducted thorough testing and debugging to ensure the robustness, reliability and performance of the application.

MTA Blaze

- Blaze MTA (Mail Transfer Agent) is a microservice architecture based MTA that accepts Mail over SMTP and delivers mail to the respective domain.
- Developed UI for MTA, resolved DNS Management challenges, Involved in the process of increase volume from **20M/day** to **50M/day.**
- Improved Grafana data visualization by integrating statistical graphs for enhanced mail delivery analysis.
- Fixed the mail queued-up issue, Monitoring the logs (includes mail injection, deliver, bounce, Transient).
- **Tech Stack**: Golang, Kafka, ClickHouse, Apache ZooKeeper, MySQL, Redis, RabbitMQ, Kubernetes, Angular, Grafana.

WhatsAppBot Pro

- Boosted customer engagement by **30%** by developing a secure WhatsApp chatbot with an open source Botpress framework.
- Engineered a customised module for seamless integration with WhatsApp chatbot using WA API, utilised Botpress Visual Flow Builder to craft intuitive conversation paths, enhance user interactions using Botpress SDK.
- Implemented the process of enabling HITL intervention to involve human agents in addressing complex scenarios.
- Deployed chatbot with SSL certificate, configured the routing using Nginx.
- **Tech Stack**: WhatsApp API, Node.js, Botpress, React, Nginx, PostgreSQL.

Google Customer Match

- Engineered Google Customer Match Uploads service for Google Ads.
- Reduced data upload time by **35%** through efficient Google Ads API integration. Overcame the limitation of direct publisher platform uploads.
- Improved data processing efficiency by **30%** by implementing error mitigation and handling missing CSV columns.
- **Tech Stack**: Python, Google Ads API.

SKILLS

Programming styles:
Object Oriented, Functional programming

Languages :
JavaScript, TypeScript, Python, Java, HTML, CSS

Frameworks / Libraries:
Express.js, Node.js, React.js, Next.js, Angular, Ionic

Databases (SQL & NoSQL) :
MySQL, PostgreSQL, MongoDB, Elasticsearch

ODM & ORM:
Mongoose, Prisma

Architectures:
Serverless, Event driven, Microservices, Monolithic

AWS
EC2, ECS, S3, Lambda, RDS, SQS, SNS, API-Gateway, Secret Manager, CDN, CloudWatch

Version control:
Git, GitHub, Bit bucket

Utilities:
Redis, Kysely, Docker, Docker Compose, Linux, Auth0, Nginx, Firebase

Message Brokers
RabbitMQ, Apache Kafka

Monitoring Tools:
Grafana

Build tools:
GitHub Actions, Jenkins(CI/CD)

APIs:
RESTAPI, GraphQL

Integrations:
Google Ads API, WhatsApp Business API, RudderStack, Razorpay, Zapier

Testing framework:
Jest, Mocha

Logging Library:
Winston

Miscellaneous
Agile, JIRA, Asana, GHL, Advanced MD, OS, Data structures, Networking, JSON, SOAP.

EXPERIENCE

LinkNest

- Improved user profile consolidation by **30%** resulting in increased engagement under a single unique link for a scalable MVP similar to Linktree.
- Developed the user interface using Next.js, Implemented Authentication and Authorization using Auth0, Mobile Emulator, Analytics graphs using ECharts.
- **Tech Stack**: Next.js, Auth0, Apache ECharts.

AMP Email Editor

- Formulated an advanced Email editor supporting both HTML and AMP templates for email campaign.
- Escalated user engagement by **25%** by improving and implementing additional features which support drag-n-drop.
- Integrated VvvebJs library using React for the client-side app.
- Implemented key features including Save Page, block components, full-screen, redo/undo, AMP compatibility, image URL uploads, resizing and server-side rendering (SSR).
- **Tech Stack**: React.js, JavaScript, Node.js, ExpressJS, MySQL.

Other key contributions

- Engineered the scalable and extensible full-stack app for the creation of AMP Email Templates, Campaigns and storing the AMP Email Responses.
- Developed the backend system for storing AMP Email Responses either in Multipart or Raw data into Elasticsearch, RESTful API to get analytics metrics of campaign submission, clicks, views and geolocation coming from email and the UI functionality for creation of AMP Emails in Next.js.
- Implemented containerization using Docker to package and deploy applications consistently across different environments, ensuring portability, scalability, and faster deployment cycles.
- Led and mentored interns, providing guidance on projects and conducting code reviews to support their growth & improve Leadership skills.
- **Tech Stack**: Node.js, Elasticsearch, Redis, RabbitMQ, Docker Compose, Docker, Next.js, Jest, Winston.

Mobile App Developer

InfoSync IT Solutions Pvt

05/2021 - 05/2022 Hyderābād, India

LYNKS TMS

- Lynks (TMS) is a multi-functional, Cloud based(TMS) designed for carriers, shippers, customers, receivers, dispatchers and brokers of all sizes.
- Responsible for building and maintaining the mobile and web application which includes development, foster to implement new features, debugging and enhanced the performance by reducing the size of the app by **20%**.
- Implemented deep linking, search functionality, multiple document upload, and payment gateways (Razor pay, Cash free) using Cordova plugin in Ionic.
- Enhanced user experience by developing Dispatcher functionality, support system for RAN and rest stops for drivers.
- Develop standardized templates and workflows for onboarding shippers and carriers to streamline documentation and requirements, reducing variability and ensuring consistency.
- **Tech Stack**: Angular, Node.js, AWS, Ionic, MySQL.

EDUCATION

B.Tech in Computer Science Engineering

Jawaharlal Nehru Technological University Hyderabad

07/2017 - 08/2021 Karimnagar, Telangana

CERTIFICATION

CCNAv7: Introduction To Networks (CISCO)

Configured the switches, end devices, OSI Protocols, routers and created IPv4, IPv6.
Using Cisco Packet Tracer to visualize and simulate a network using everyday examples.

Software Engineering Virtual Experience at JP Morgan Chase

Implemented Interface with a stock price data feed and setup the system for analysis of the data,
Implemented the Perspective open source code in preparation for data visualization.

POC

Smart Question Paper Generator

Developed a full stack app for generating question paper for colleges and school by leveraging the OpenAI model using Node.js, Next.js and MySQL, managed the latency of almost **70%** by reducing the resources.

Email Editor Tool

Implemented React application using GrapeJS to test multiple email templates that support AMP, drag-n-drop and other features.

Implemented a React plugin that can be used in other existing products as a plugin.

KEY ACHIEVEMENTS

Local Hack Day(BUILD) - MLH

Secured **117th** rank among **3000+** participants in the coding hackathon.
Projects are on **devpost.com/taurusu222**

College Ambassador (E-Cell IIT Bombay)

Established Entrepreneurship group (E-cell) in college through NEC (National Entrepreneurship Challenge), Mentored to 250+ students and organized workshop related to entrepreneurship.

Business Generation

Heightened Seller Onboarding : Successfully onboarded over 500 new sellers to the platform in a 3-month period, expanding product offerings and increasing marketplace diversity by **40**%.

Buyer Acquisition Growth: Achieved a **35%** Increase in buyer registrations through targeted marketing campaigns flows, driving more traffic to the platform and boosting transaction volumes.

Data-Driven Enhancements

Utilised analytics and performance metrics to identify bottlenecks, achieving an **increase in backend performance** through targeted optimizations.

Technical Documentation and Process Standardization

Created **comprehensive technical documentation** for backend services, streamlining onboarding for new team members and improving adherence to best practices for better communication.

CONTRIBUTIONS

Contributor at Coffea (FOFO Model)

Formulated the Shopify custom App using React Remix which contains a QR code for a particular product, Shopify Extension for customer submission review and product variants which are integrated into the Shopify theme store.

Contributor at The Spark Foundations

Developed the Web Services for the Covid-19 fund-raising, which performs the transactions through apis for Instamojo Payment Gateway Interface.

Contributor at Udyogini - A Women Empowerment NGO

Developed the web application for donors. Proposed a database design, enhancing user onboarding and expert engagement while ensuring efficient data management.
Boosted the SEO for site ranking and content management for social sites to raise up to **60%** user onboarding.

Contributor at Ora Rental - One Stop Solution for renting the Manufacturing Products

Implemented the product information and listing feature in React and Node.js by enhancing the responsiveness of site which lead to the development of **customer-centric features**, improving key product functionality and increasing customer satisfaction by **25%** as measured by user feedback and ratings.

Automate Workflow using LangChain AI Assistant

Integrated third-party applications such as Zapier, Google Serper etc to automate workflows, eliminating the need for manual assignment and reminders by leveraging the OpenAI to streamline the tasks, reduce errors, and improved accuracy.
